REASONS FOR ALLOWANCE

- The following is an examiner's statement of reasons for allowance: The present invention is directed towards a device applied to image extraction and, more particularly, to a device that appends a recognition mark to an extracted image so that the recognition mark can be used as a referential benchmark for image alignment when joining images. The closest prior art, Bloomberg et al. (USPN 5,201,011), shows a similar system, in which, an image markup detection device and method identifies and extracts markup lines and regions marked automatically or interactively by a user with an ordinary pen or pencil, only morphological image processing operations on a scanned source image are used, resulting in the extrapolation of markup lines and marked region. The markup lines are either extracted from the image, or the background information of the image is removed, leaving only the markup lines. However, Bloomberg et al. fail to address: "for when the image of the object is extracted during the segmented extractions, the image of the

positioning slot can also be extracted so as to obtain an image with a recognition mark, which can be used as a benchmark for image joining to obtain an entire image of the object". This distinct feature has been added to both independent claims and renders them allowable.

- Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
